

## **TRUAUDIO, A TRU INNOVATOR IN PREMIUM ARCHITECTURAL SPEAKERS**

TruAudio definitely breaks the mould when it comes to speaker manufacturing. Constantly on the cutting edge of speaker technology and innovation, we strive to raise the bar when it comes to speaker design.

Our future-focused vision stems from our past. We previously owned a nationally recognized home electronics integration company. During this period, we designed and installed thousands of home theatres and multi-room audio systems. Needless to say, we gained valuable knowledge in what consumers expect and need from an audio speaker.

Backed with that knowledge and experience, we founded TruAudio to design and manufacture a full line of premium custom audio products. We go to great lengths to make sure that we offer speakers that blend into the room's decor while still delivering unforgettable, life-like sound. Whether it's whole-house sound during a house party or simply relaxing on the couch enjoying your favourite DVD, TruAudio will enhance your audio experience like no other architectural speaker can.

TruAudio speakers are constructed with materials proven to perform. This includes the right mixture of woven carbon fiber, titanium, aluminium and polypropylene. Every crossover is built to match each driver and then tested to make sure it delivers to pure perfection. For our architectural speakers, we assemble the components into a high-grade, flush-mount ABS frame that mounts into your wall or ceiling – almost disappearing. With cabinet speakers we use specially designed MDF wood wrapped in either a high-end vinyl or real wood veneer. This ensures a long-lasting, elegant look as well as guarantees precise acoustical reproduction.

### **TRUAUDIO'S LIFETIME WARRANTY**

Now, if all that's not enough, TruAudio back all this with a lifetime warranty. No wonder TruAudio is quickly becoming the choice for custom architectural speakers.
